

PERFORMANCE FREERIDE HYDROFOIL

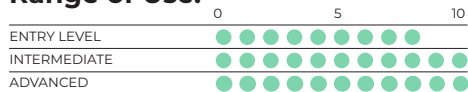

The MA1100 is suited for intermediate to advanced riders looking for a performance front wing for use in moderate to strong winds. The medium aspect ratio and medium tapered planform provide an ideal balance between lift, glide and agility. The optimised profile offers accessible low-end power (lift at low speeds) combined with an incredible top end range and control at high speeds. This design is ultra maneuverable for cranking tight turns in the flat through to large waves. At speed it has solid pumping performance to get you through wind lulls or from one swell to another.

The MA1100 is also a fun freeride/freerace kite foil for moderate winds. It has speed, performance, maneuverability and a massive range for intermediate to advanced riders.

Features:

- Full Carbon Construction
- Performance Surface Coat
- Titanium Hardware
- Protective Covers
- Exceptional Ozone Factory construction

Range of Use:

- PERFORMANCE FREERIDE HYDROFOIL RANGE
- ACCESSIBLE LIFT, PUMP AND GLIDE PERFORMANCE
- INCREDIBLE LOWER AND UPPER RANGE
- LIGHT WEIGHT ULTRA STRONG FULL CARBON CONSTRUCTION
- PERFORMANCE SURFACE COATING
